

5 STEPS IF YOU SUSPECT A TERMITE ATTACK

1 GET EXPERT HELP.

It takes a pest management professional to know termite behavior — their telltale signs and the damage they leave behind. Better call in the qualified.

2 IDENTIFY THE ENEMY.

Can't tell if they're ants or termites? Among other things, ants have a narrow waist and termites have straight antennae. But try to collect one to aid in identifying it.

4 CONQUER THE QUEEN.

As long as there's a termite queen, there's a termite colony. And if there's a colony, there's a threat to your property. Kill the queen. Kill her subjects. Crumble her colony.

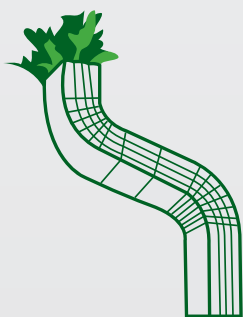

3 KNOW YOUR OPTIONS.

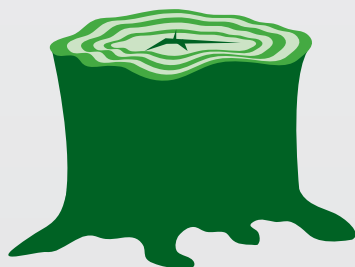

The Sentricon® System works 24/7, while liquid termite treatments get less effective over time. Sentricon is in tune with what termites like, and research shows that termites actually prefer the bait over wood!

5 TAKE ACTION TO AVOID SWARMING TERMITES ALTOGETHER.

CLOGGED GUTTERS

TREE STUMP

TOO MUCH MULCH

Clogged gutters, dead tree stumps and mulch piled against your home leave out the welcome mat for termites.

Visit Sentricon.com to learn more about termites and how the Sentricon System is the best termite protection treatment available.
